Uzbekistan, Tashkent

Education

- BSc Information technology and Engineering from IUT Graduated

Work History

Senior Full Stack Engineer, Uravo, Tashkent

November 2024 to Current

- Used AWS, Python, TypeScript, Node.js and Nest.js to build event-driven integrations across CRM and messengers, so the business stopped paying staff to copy data by hand and records stayed correct in real time.
- Applied React, Redux, and JavaScript, HTML, CSS to build the candidate-facing UI of a recruiting platform handling thousands of records, so recruiters could manage applicants without the app slowing down or losing data.
- Wired PostgreSQL, REST APIs, and webhooks together to build two-way sync with datahub and stabilize a payment integration, so subscription billing stayed accurate across every connected system.
- Used Docker and CI/CD (GitHub Actions) to containerize services and automate deployments to cloud so new code shipped to production the same way every time without slow, error-prone manual steps.
- Leveraged Next.js to build fast-loading, highly polished marketing pages and optimise Google SEO rankings to drive higher lead generation.
- Used Agile (Scrum) to run sprint planning, standups, and code reviews while leading two junior engineers, so work shipped in predictable two-week cycles and blockers got caught early instead of at the deadline.

Full-Stack Developer at StylemixThemes, Tashkent

April 2023 to October 2024

- Built and shipped an AI content-generation and chatbot system (OpenAI API, prompt engineering, PHP backend) used by 10k non-technical site owners in production and deployed as a WordPress plugin, AiBud WP.
- Applied Vue.js and webhooks to build the checkout and financial logic of the Cost Calculator plugin, so customers got instant accurate quotes and could pay on the spot.

Full-Stack Developer at WP-Webhooks, Tashkent

August 2022 to April 2023

- Used webhooks, and PHP to build 25+ WordPress integrations (UltimateMember, Yoast SEO, WooCommerce), so sites passed data to other apps automatically without manual exports.
- Combined React, Tailwind, and REST APIs to build the plugin admin screens and connect WhatsApp and Zoom, so users could set up automations from one dashboard.

Lead Software Engineer at Zmarket.uz, Tashkent

October 2020 to August 2022

- Used Laravel, Vue, and MySQL to build a CRM for accountants, managers, and vendors, so the company tracked customers and collected payments online in one place.
- Applied Laravel Queues, Redis, and REST APIs to build an automated billing and penalty-fee system, so overdue debtors were charged automatically with no manual follow-up.
